Quality Criteria

quality_criteria.pdf

01 Machine learning (ML) helps classify the pilot's uploaded documents.

02 The ML workflow extracts text and checks source passages before export.

03 ML classification organizes documents so reviewers can find relevant evidence.

04 ML output is reviewed against the extracted text from the original files.

05 ML-assisted retrieval uses indexed passages to answer document questions.

06 ML does not authorize a claim when the indexed files contain no matching fact.

07 The ML review checks the source name, passage wording, and requested subject.

08 ML classification uses labels supported by the indexed document text.

09 ML-assisted answers include source passages for reviewer verification.
